# Connecting AVATON IoT Smart Device to Local WiFi Network

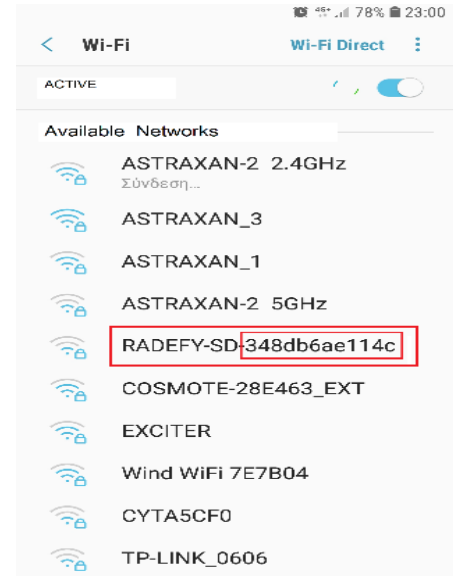

To connect the AVATON IoT Smart Device to the Local WiFi Network, we perform the following steps:

1. We connect the AVATON to the power plug,
2. In 1-2 sec the **Green Light** will turn ON indicating that the power supply is connected and the AVATON IoT has power
3. A few seconds later the **Red Light** will start flashing, indicating that the AVATON IoT is not connected to the WiFi
4. Press button S4 for 1-2 sec as indicated in the video and the picture below:

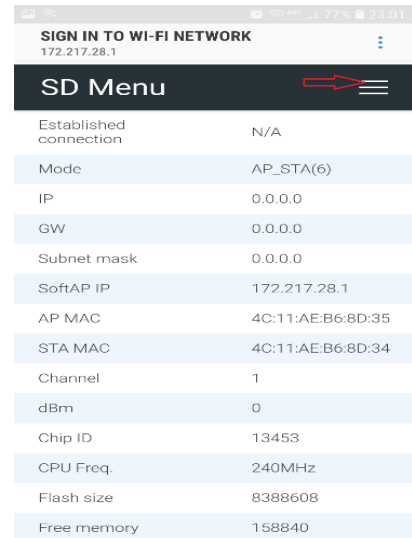

5. A few seconds after you release the S4 button, the Red light will start blinking faster

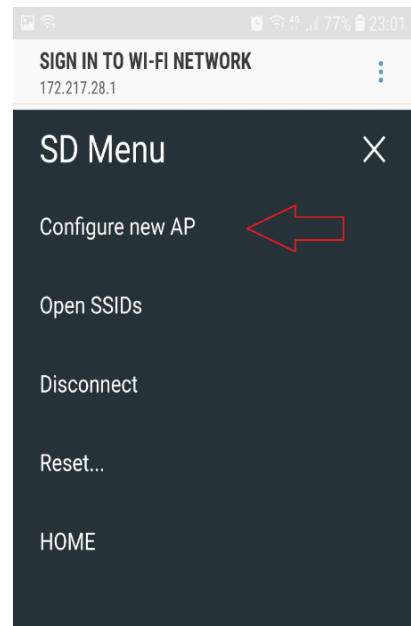

6. On your mobile phone's WiFi Connection settings, the RADEFY WiFi network connection [RADEFY-SD-xxxxxxxxxxxx] will appear
7. Select RADEFY-SD-xxxxxxx from your mobile WiFi connection list
8. When prompted enter the RADEFY-SD-xxxxxxxx password 12345678
9. From the Current Network, select the RADEFY-SD-348b6ae1.. to open the Browser

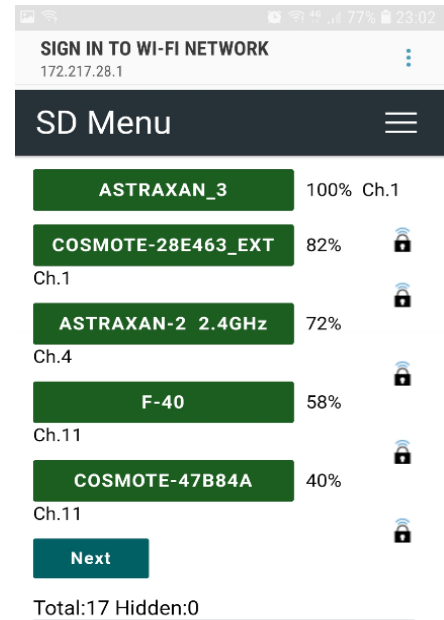

10. When in the Browser press on the Burger (☰) on the top right side of the screen

11. Select "Config New AP"

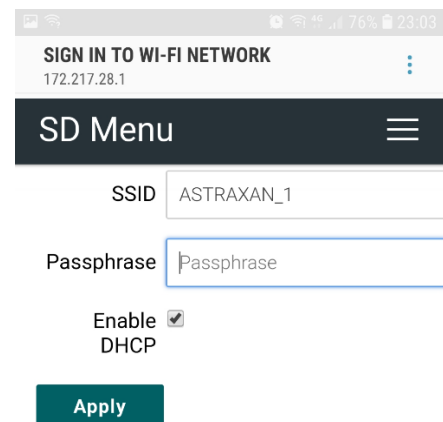

12. Select the Local WiFi network from the list

13. Enter the Local WiFi network's password

14. Press Apply

15. If password is correct the Browser will automatically close from your phone and the Red Light will stop blinking and remain ON.

16. If password is not correct it will take you to the Local WiFi network selection page to start network selection from the beginning.
